

# TESTER LAMPS CCFL **TL1040**

*Able to check lamps on LCD screens ranking from 10" to 42" in size*

## **GENERAL INFORMATION**

The CCFL lamp analyser for LCD TV provides a diagnosis of LCD television/monitor panel-mounted lamp operations without having to dismantle the part of the corresponding panel housing the lamps and without having to unplug the different connectors interacting between the inverter plate and the lamps.

## **RESULT**

It gives a full, reliable análisis so that, if the instrument indicates the malfunctioning of one or several lamps, the panel can be dismantled and the lamp replaced with complete safety. Where the instrument indicates that the lamp works correctly, the fault is indicated as being on the inverter board. The diagnostic provides a significant reduction in repair times, avoiding pointless dismantling.

## **ADVANTATGES**

Reduction of important time in the repair, since we will avoid useless disassemblies.

<b>INTERNAL POWER ADAPTER</b>	12Vcd nominal 13Vdc máx
<b>EXTERNAL POWER ADAPTER</b>	100 ~ 240 Vac / 12Vcc 1.6 <sup>a</sup> 19,2W
<b>TENSION OF TEST</b>	2.5KVrms
<b>Able to check lamps on LCD screens ranking from 10" to 42" in size</b>
