English version

Introduction

• Do not expose the PU007V2 to extreme temperatures. Do not place the device in direct sun light or close to heating elements.

PU007V2 Sweex 1 port Parallel & 2 Port Serial PCI Card

- · Do not use the PU007V2 in extremely dusty or moist environments.
- · Prevent hard shocks or impacts of the device, as this can cause damage to the internal electronics.

Hardware Installation

- 1. Make sure the computer is turned off and that there is no power connected.
- 2. Also remove the printer and monitor cable, because these have their own power supply.
- 3. Now unscrew the computer casing.
- 4. Make sure that you undo yourself of possible static electricity. This can be done by grabbing a (naked) central heating pipe or an unpainted water pipe. Pay attention not to use a magnetic screwdriver. Briefly touch the iron frame of the PC casing. Avoid direct contact with the contact points of the PCI slot and contact points on the graphics card.
- Locate a free PCI slot and remove the metal protection plate that is in the computer casing for the intended slot. Consult the manual of your computer to find the PCI slot.
- 6. When possible fasten the card with screws so it can not move.
- 7. When the card is mounted successfully, check if the other cards are still fitted properly in their expansion slot. It can happen that when a new card is added the other cards rise a little with as result that the card, or even the entire computer, may not work.
- 8. Close the computer casing and reconnect all cables properly.
- 9. Turn on the computer.
