Ready

Class A++
Screening

The options provided by 4G (LTE) has brought about an era of fast browsing, endless streaming and the uninterrupted reception of huge volumes of data. Networks are expanded, offering many advantages to smartphone owners.

But this development can also have a negative influence on television signals.

To prevent interference on television channels, Hirschmann Multimedia has added a series of innovations to its existing range of products.

The new KOKA 9 TS COAX CABLE is specially designed with a high-quality triple shielding. It takes no time at all to create optimal reception quality with high reliability.

A smart household solution focused on the future.
